Directory of Residency and Fellowship Programs in Women’s Health

Mission Statement

The mission of the Association of Academic Women’s Health Programs (AAWHP) is to improve the health of women through leadership in research, education clinical models, and community partnerships. This mission is carried out through networking, leadership and mentoring collaborative projects, lobbying and advocacy, political and social commentary, education of policy-makers, partnership with national organizations, and creation of interdisciplinary innovative models.

June 2013

Overview

Residencies in Interdisciplinary Women’s Health

- Brown University Warren Alpert Medical School (RI) 536
- Massachusetts General Hospital/Harvard University School of Medicine (MA) 537
- Northwestern University, Feinberg School of Medicine (IL) 538
- Stony Brook University Medical Center (NY) 539
- University of Alabama Hospital in Birmingham (AL) 540
- University of Kentucky (KY) 541
- University of Pittsburgh Medical Center/University of Pittsburgh School of Medicine (PA) 542
- Virginia Commonwealth University Medical Center (VA) 543
- Western Michigan University School of Medicine (MI) 544

Fellowships in Women’s Health

- Bixby Center for Global Reproductive Health, San Francisco (CA) 546
- Boston University School of Medicine/VA Boston Healthcare System (MA) 547
- Brigham and Women’s Hospital/Harvard Medical School (MA) 549
- Brigham and Women’s Healthcare, Harvard Medical School (MA) 550
- Brown University Warren Alpert Medical School (RI) 551
- Case Western Reserve University/University Hospitals Case Medical Center (OH) 552
- Cedars-Sinai Medical Center (CA) 553
- Cleveland Clinic Foundation (OH) 554
- Columbia University Medical Center (NY) 555
- East Carolina University Brody School of Medicine (NC) 556
- MacNeal Hospital (IL) 557
- Mayo Clinic College of Medicine (MN) 558
- Medical College of Wisconsin/ Milwaukee Veterans Affairs Medical Center (WI) 559
- Portland Veterans Affairs Medical Center (OR)/Oregon Health and Science University 560
- San Francisco VA Advanced Fellowship in Women’s Health 561
- University of California, Los Angeles/VA Greater Los Angeles Healthcare System (CA) 562
- University of California at San Francisco/Women’s Health Clinical Research Center (CA) 563
- University of Illinois at Chicago College of Medicine (IL) 564
- University of Medicine and Dentistry of New Jersey/Robert Wood Johnson Medical School (NJ) 565
- University of Michigan School of Medicine (MI) 566
- University of Pittsburgh School of Medicine/Pittsburgh Veterans Affairs Medical Center (PA) 567
- University of Wisconsin School of Medicine/Veterans Affairs Medical Center (WI) 568
- VA San Diego Healthcare System (CA) 569
Overview

In support of interdisciplinary Women’s Health training programs, the Journal of Women’s Health is pleased to publish the Directory of Interdisciplinary Women’s Health Residencies and Fellowships. The Directory was initially developed under the direction of Dr. Saralyn Mark from a national survey of 1,355 hospitals conducted in September 1995. Information from the Association of American Medical Colleges, the American Association of Colleges of Osteopathic Medicine, and the American Hospital Association was used to identify institutions approved for Women’s Health residency and fellowship programs. The following are criteria for inclusion of residency and fellowship programs in the Directory:

1. The program should be interdisciplinary in nature, crossing traditional boundaries, in order to comprehensively focus on a wide range of Women’s Health concerns and issues, including, but not limited to, mental health, aging, reproductive health, urogynecology, gender differences in disease presentation and treatment, bone health, heart health, and breast health.

2. The program should have a separate application process with its own director within an academic medical center or accredited graduate medical education program.

3. To qualify as a residency program in Women’s Health, the program should offer a specialized curriculum in Women’s Health in addition to the required activities of a traditional residency track.

The Directory was previously published by the Office on Women’s Health in the Department of Health and Human Services in 1995, and has been updated annually since then. In 2004, the Association of Academic Women’s Health Programs (AAWHP) assumed responsibility for maintaining and updating the Directory. AAWHP is a national non-profit organization whose members include Women’s Health educators, researchers, and program directors at academic institutions. Its mission is to improve the health of women through leadership in research, education, clinical models, and community partnerships and to accelerate translation of research into clinical practice. This mission is carried out through networking, leadership and mentoring, collaborative projects, advocacy, political and social commentary, education of policymakers, partnership with national organizations, and creation of innovative models, including Women’s Health fellowships and residency programs.

The interdisciplinary programs included in this Directory model the integration of educational experiences across departments, such that future physicians can be trained to more effectively provide comprehensive care for women. In addition, Women’s Health fellowships are a breeding ground for new researchers in this field. The publication of the Directory will help to disseminate program information and foster awareness of these programs, and will hopefully expand and enhance graduate medical education in the area of Women’s Health.

If any training program meets inclusion criteria and has been unintentionally omitted from this Directory, AAWHP would like to be promptly notified. The Directory will continue to be updated annually as new curricula develop. For questions regarding program inclusion or for information regarding AAWHP, please contact Millie Becker at jwh@vcu.edu.
Residencies in Interdisciplinary Women’s Health
Eligibility Requirements

Applicants must match into the General Internal Medicine/Primary Care Program.

Application Process

Residents in the Women’s Health Track first match into the General Internal Medicine Program, then declare their desire to participate in the track.

Required Activities

- Clinical experiences are organized throughout the first 6 months of ambulatory block over the first two years of residency.
- Research generally begins in the second year of residency and will culminate in a publication and/or national presentation.
- Advising/Mentoring takes place quarterly with the clinical and research advisors.

Resident will also have a half-day per week second continuity site in women’s health beginning in their 2nd year and continuing through residency training.

There is also a required teaching activity. In their 3rd year of residency, residents will teach 1st year GIM residents in Ambulatory Block. They will develop a seminar in an area of women’s health in which they are interested.

Elective Activities

Numerous elective experiences exist. A month-long women’s health elective is suggested for all track participants. This includes clinical experiences in the GYN Clinic, Breast Surgery Clinic, Mammography, Urogynecology, and Psychiatry. Residents may also choose to observe in Colposcopy Clinic.

Special Degree(s)/Certificate(s) Offered

There is no special degree awarded, although at graduation, they will receive a certificate acknowledging their participation.

Goals of the Program

Our goal is to foster the development of a physician who excels both from a clinical as well as academic perspective in women’s health.

Other Program Features

Our program focuses on both the clinical and academic aspects of Women’s Health. Clinically, our focus is on women’s health from an internal medicine perspective. We have clinical experiences at women’s health internal medicine practices and at our women’s prison. While these dominate the clinical experiences, we also have gynecologic experiences in women’s health. Academically, our research advisor guides the resident through a project with the goal of presenting at a national meeting.

Reasons for Initiating Program

Brown University Medical School has always excelled clinically and academically in women’s health. We decided to seize upon those strengths and create an organized curriculum for applicants interested in a clinical or academic career in women’s health. There remains a need for physicians who specialize in the care of women.
Eligibility Requirement(s)
A medical degree is required.

Required Activities
In addition to inpatient rotations in Internal Medicine, residents are required to participate for three to four months each year in a multidisciplinary primary care practice for women. This experience provides ambulatory subspecialty training in Gynecology, Orthopedics, Dermatology, and breast disease.

Elective Activities
Six- to eight-week electives in Endocrinology, Infectious Disease, Arthritis, and Obstetrics and Gynecology are offered in the third year of residency.

Special Degree(s)/Certificate(s) Offered
Residents are board eligible in Internal Medicine.

Goals of the Program
To provide comprehensive training in ambulatory General Medicine, Gynecology, and other specialties relevant to primary care of women in the context of an inpatient Internal Medicine residency.

Other Program Features
Formal mentorship programs and mini-courses in clinical and nonclinical topics with specified goals and objectives are available.

Reason for Initiating Program
The program was created to expand opportunities within existing primary care residency training to focus on the special needs of women in an integrated, multidisciplinary clinical practice site.
Eligibility Requirements
Acceptance to Northwestern Internal Medicine training program is required.

Application Process
There is not a separate match for the women’s health track. Those interested in the program should apply to the categorical internal medicine program through the Electronic Residency Application Service (ERAS). The program is listed as Northwestern/McGaw/NMH/VA-IL, the program number is 2247140CO for Categorical Medicine. Anyone matching in the categorical internal medicine program is eligible to participate in the track.

Required Activities
Residents will be required to 1. Attend the women’s health conferences and monthly journal club; 2. Rotate through the multidisciplinary Women’s Health Block one month each year. This block includes but is not limited to clinics experiences in gynecology, osteoporosis, urogynecology, breast disease/breast imaging, endocrinology/PCOS, weight management, cardiology, dermatology. 3. Complete a two-month research block in an area of women’s health. 4. Participate in continuity clinic supervised by women’s health preceptors (one half day a week year 1, two half days a week years 2 and 3).

Elective Activities
Residents may elect to do 1-2 months of gynecology, additional Women’s Health Block months, or other electives months designed to meet their individual interests.

Special Degree(s)/Certificate(s) Offered
A certificate in women’s health will be offered at the end of the residency program.

Goals of the Program
The track was established to provide research opportunities and additional clinical experience in the women’s health and gender-based medicine for internal medicine residents. Residents in this track will receive this education in conjunction with the usual training in the categorical program. Upon completion of the curriculum, graduates will be well prepared for pursuing academic careers in women’s health, including further specialty training.

Other Program Features
Northwestern Feinberg School of Medicine has been awarded NIH funding for the Building Interdisciplinary Research Careers in Women’s Health program (BIRCWH), a career development grant which supports young faculty focused on careers in women’s health research. Women’s health residents will be able to participate in many of the conferences offered to the BIRCWH awardees including a core course in women’s health and special research seminars.

Reason for Initiating Program
The program was initiated to expand the clinical and research opportunities for internal medicine residents interested in women’s health.
Eligibility Requirements
A medical degree is required.

Application Process
Interested candidates should apply through the Primary Care Residency Program.

Required Activities
The following clinical activities are offered: 1) Weekly continuity clinic in the Veterans' Affairs Women's Health Clinic, 2) One month rotation in women's health including clinical training in women's primary care clinic, ob/gyn clinic, sexually transmitted disease clinic, breast care center, osteoporosis center, women’s cardiology clinic, urogynecology clinic, 3) attendance at didactic sessions and journal clubs discussing women's health issues.

Elective Activities
Opportunities to work one-on-one with women’s health primary care providers in private practice settings, research opportunities in women’s health preventive medicine.

Special Degree(s)/Certificate(s) Offered
Special degrees and certificates are not offered.

Goals of the Program
To develop expertise in preventive and primary health care of women.

Other Program Features
The primary care residents are fully integrated into the residency training program. The unique training of the primary care residents in the women’s health track enables them to become experts among their peers in the practice of primary care for women.

Reason for Initiating Program
Recognition of the unique aspects of care essential to provide comprehensive and excellent primary care to women.
Eligibility Requirement(s)
Acceptance to University of Alabama Hospital in Birmingham, Internal Medicine Residency training program is required.

Required Activities
Residents will be required to complete the following activities: 1) attend a Continuity Women’s Clinic every other week, 2) participate in 3-4 month long ambulatory rotations with a 50% focus in women’s health, 3) participate in women’s health conferences and journal clubs, and 4) complete all requirements of the UAB Internal Medicine residency program.

Elective Activities
Elective activities include women’s health research projects and attendance of regional/national meetings.

Special Degree(s)/Certificate(s) Offered
Residents are board eligible in Internal Medicine.

Goals of the Program
To provide training in primary care with an additional focus in women’s health. Residents receive gender specific training to allow provision of comprehensive healthcare to women, in addition to a solid foundation in all traditional aspects of internal medicine.

Other Program Features
Participation in Gynecology Clinic, Breast Clinic, Osteoporosis Clinic, High Risk OB Clinic, Endocrine Clinic, STD Clinic, Continence Clinic, and other ambulatory rotations. Curriculum is very flexible and tailored to the interest and requests of each individual resident.

Reason for Initiating Program
Our Women’s Health Residency was developed to provide interested residents with additional expertise in the area of women’s health.
Eligibility Requirement(s)
An applicant must be an Internal Medicine resident in good standing, with an interest in women’s health.

Required Activities
Residents must treat patients in the Women’s Health Clinic under the direction of a women’s health preceptor one afternoon per week for 2-3 years, attend monthly women’s health grand rounds, and participate in a weekly evidence-based women’s health pre-clinic conference.

Elective Activities
Elective activities include an ambulatory GYN elective, female urology, comprehensive headache clinic, and a research elective.

Special Degree(s)/Certificate(s) Offered
A certificate as resident in women’s health is available.

Goals of the Program
To provide residents with solid internal medicine training, with additional expertise in women’s health. This expertise is evidence-based and is obtained through clinical experience.

Other Program Features
Multi-disciplinary clinic designed by women, for women, which includes primary care providers, adult and adolescent gynecology, rheumatology, gastroenterology, neurology and urogynecology. The clinic has a research and educational program including the Kentucky Women’s Health Registry designed to understand the epidemiology of symptoms and diseases as well as to increase participation of women in clinical trials.

Reason for Initiating Program
This Women’s Health track was started as part of an effort to provide specific education and clinical skills in women’s health to internal medicine residents. Past surveys of both faculty and residents at our institution revealed a deficit in women’s health knowledge, and a deficit of women’s health topics in the traditional curriculum. Additionally, this women’s health track is one facet of an expanding women’s health curriculum throughout the entire medical center, as our University is the recipient of a multidisciplinary FIPSE (Fund for Improving Post-Secondary Education) grant to integrate women’s health into the curriculum of health professionals.
Eligibility Requirement(s)
A medical degree is required.

Required Activities
The Women's Health Track combines areas of obstetrics, gynecology, psychiatry, and adolescent medicine into a multidisciplinary experience that prepares residents to provide more comprehensive gender specific primary care to women patients. Topic areas covered in depth include: contraceptive management, menstrual dysfunction assessment, postmenopausal hormone replacement, cervical and breast cancer screening, medical management of the pregnant patient. Traditional internal medicine domains such as cardiovascular disease, lipid disorders, osteoporosis, autoimmune diseases are presented with special attention to the gender based differences in diagnosis and management. Special attention is also given to the management of psychosocial issues with a unique burden in women such as domestic violence, sexual violence, eating disorders, depression, and anxiety.

These educational goals are accomplished in several ways. Women’s Health Track residents have specially designed primary care clinics staffed by core faculty in the Women’s Health Program where gender issues are routinely managed. In addition, there are specialized block rotations over the three years which cover routine and acute gynecologic care, urogynecology, reproductive endocrinology, adolescent medicine, the women’s heart program, behavioral medicine, and the medical complications of pregnancy. Special didactics such as a monthly journal club dedicated to the discussion of women’s health topics are also included.

Elective Activities
Elective opportunities in addition to the required core rotations abound. We are affiliated with both Magee Women’s Hospital and the VA Pittsburgh National Center of Excellence in Women’s Health. Special rotations include: high risk breast clinic, cardiovascular disease in women, thyroid disorders, management of the midlife woman to name just a few.

Special Degree(s)/Certificate(s) Offered
Residents are board certified in Internal Medicine but receive a certificate of completion of the Women’s Health Residency Track.

Goals of the Program
The Women’s Health Track is a specialized course of instruction designed to provide comprehensive internal medicine training with an added emphasis in managing problems different in, unique to, or more common in women. It is appropriate both for trainees envisioning a career in primary care as well as those planning for a subspecialty career with a focus on gender issues in their specialty.

Other Program Features
Weekly interdisciplinary women’s health seminar series that allows for in-depth discussion of specific issues related to women’s health.

Reason for Initiating the Program
To provide a unique training opportunity for both primary care and subspecialty physicians to learn about comprehensive, gender specific care for women.
Eligibility Requirement(s)
A medical degree is required.

Required Activities
In addition to the required rotations and conferences in the Internal Medicine program, residents participate in outpatient clinics in Gynecology throughout the year. Other required activities include two months in the multidisciplinary Women’s Health Center and a one-month multidisciplinary rotation in Breast Health. Additionally, throughout the year there are seminars and small discussions on primary care and women’s health topics in conjunction with half-day continuity clinics.

Elective Activities
Residents may elect further experience, schedule permitting.

Special Degree(s)/Certificate(s) Offered
Residents are board eligible in Internal Medicine.

Goals of the Program
To provide broad-based clinical training in Internal Medicine with a central focus on women’s health promotion, disease prevention and biopsychosocial issues; to increase awareness among health care professionals regarding issues in women’s health, and to promote leadership, research and education in women’s health.

Other Program Features
Residents are exposed to a wide variety of learning opportunities, clinicians, and patients. In Bone Clinic, the use of bone densitometry and osteoporosis management are included during the Women’s Health blocks. Other clinic experiences during this block include Urogynecology, Gyn Oncology, and Endocrine. Additionally, residents may attend the Fan Free Clinic, an outreach clinic, and Women’s Health Physical Therapy, which exposes residents to therapy for urinary incontinence and constipation. The Breast Health month is a multidisciplinary rotation in medical oncology, surgical oncology, radiation oncology, mammography, pathology, and lactation consultation. A Women’s Health Journal Club meets monthly to discuss issues relevant to women’s health. There is a strong mentoring component, utilizing expert women faculty as discussants and lecturers.

Reason for Initiating Program
To provide comprehensive multidisciplinary training for Internal Medicine residents with interest in the area of Women’s Health, whether they are planning a career in General Medicine or subspecialty training.
Eligibility Requirement(s)
A medical degree is required.

Required Activities
This program requires the completion of five rotations that are one-month in duration:
1) Adolescent Medicine, 2) Behavioral Medicine, 3) Subspecialty elective with a Women’s Health focus, 4) Perinatology, 5) Advanced Gynecology

Elective Activities
Elective activities include women’s health research projects, monthly women’s health conferences, evening women’s health journal club meetings, monthly grand rounds, and an extensive women’s health reading curriculum.

Special Degree(s)/Certificate(s) Offered
A certificate of focused training in women’s health is offered.

Goals of the Program
To provide additional clinical experiences and evidence-based training in women’s health, beyond what is provided in a standard primary care curriculum.

Other Program Features
Involvement of OB/GYN and surgical specialists in training/educational experiences as well as exposure to complementary and alternative medicine topics.

Reason for Initiating Program
There was significant interest among medical students, primary care residents, and faculty associated with our residency programs.
Fellowships in Women’s Health
Eligibility Requirements
A fellow must have satisfactorily completed a residency in obstetrics and gynecology accredited by the American Council for Graduate Medical Education (ACGME) or the Council of the Royal College of Physicians and Surgeons of Canada (CRCPSC).

Required Activities
Clinical experience sufficient to develop competency in contraception and abortion care according to the requirements outlined in the General and Special Requirements and Guide to Learning, completion and presentation of a publishable research project, participation in a global health placement, an completion of a masters degree in public health or science.

Elective Activities
Rotations with the Population Council, World Health Organization, and similar agencies and NGOs are available.

Special Certificates/Degrees Offered
Masters Degree in Public Health or Masters Degree in Science.

Goals of the Program
The objective of the program is to develop specialists focused on research, teaching and clinical practice in contraception and abortion. Working with respected and innovative leaders in the field, fellows receive training in clinical and epidemiologic research, develop clinical and teaching skills, have opportunities to work internationally and connect to a rapidly expanding network of family planning experts.

Reason for Initiating the Program
To enhance the academic and operational status of family planning and abortion services and to prepare specialists who can provide family planning leadership through academic or programmatic positions while also providing excellent clinical care.
Medical Track:

Eligibility Requirements

Eligible physicians must have graduated from an Accreditation Council for Graduate Medical Education (ACGME) accredited residency; be board certified or board eligible in internal medicine (or one of its subspecialties), or family practice. An active, unrestricted U.S. medical license is required.

International medical graduates must also have a current visa to participate in the program and an Educational Commission for Foreign Medical Graduates (ECFMG) certificate that is valid indefinitely. Applicants with a J-1 visa must have current ECFMG sponsorship to participate in the program.

Required Activities

The VA Health Issues of Women Veterans Fellowship in collaboration with the Boston University (BU) General Internal Medicine Fellowship Program provides two years of post residency, post-doctoral research, education, and clinical learning opportunities to eligible physicians. The program began in 1994 and graduates have gone on to successful careers in academic women’s health as researchers and educators. The program is based on a comprehensive model of women’s health with a focus on addressing health disparities in women. Fellows spend approximately 75 percent of their time in project work and 25 percent in clinical care at selected VA sites. Graduates are expected to be role models in leading, developing, conducting, and evaluating innovative research as well as excelling at medical education and clinical care in women’s health settings. Fellows complete a Master’s program (Health Services, Epidemiology or Education) and take course work that helps facilitate their career objectives.

Career development seminars at BU in clinical research, medical education, administration and management are core elements of the fellowship. A minimum of two scholarly projects are required during the fellowship, at least one must focus on the health of women Veterans. Current active research topics include trauma exposure and health outcomes, cancer prevention, and gender disparities.

Postdoctoral Research Track in Women’s Mental Health:

The primary objective of this training program is to produce clinical researchers in women’s mental health, with a focus on the scientific study of stress, trauma, and posttraumatic stress disorder (PTSD). The fellowship represents one track within the Advanced Fellowship in Women’s Health, is closely affiliated with the BU School of Medicine and is housed within the Women’s Health Sciences Division of the National Center for PTSD (WHSD-NCPTSD). Resources include didactic training, technical support personnel, psychophysiology and cognitive research laboratories, advanced computing facilities, and a broad range of professional expertise. Fellows may participate in ongoing research, initiate independent research projects, conduct secondary analyses on existing data sets, prepare applications to federal and other funding agencies for research support, and provide direct clinical services to patients under clinical supervision. Fellowship graduates should have the potential to be role models in leading, developing, conducting, and evaluating innovative research, education, and clinical care in health issues pertaining to women veterans.
Psychology Track

Postdoctoral Research Track in Women’s Mental Health:

The primary objective of this training program is to produce clinical researchers in women’s mental health, with a focus on the scientific study of stress, trauma, and posttraumatic stress disorder (PTSD). The fellowship represents one track within the Advanced Fellowship in Women’s Health, is closely affiliated with the BU School of Medicine and is housed within the Women’s Health Sciences Division of the National Center for PTSD (WHSD/NCPTSD).

Resources include didactic training, technical support personnel, psychophysiology and cognitive research laboratories, advanced computing facilities, and a broad range of professional expertise. Fellows may participate in ongoing research, initiate independent research projects, conduct secondary analyses on existing data sets, prepare applications to federal and other funding agencies for research support, and provide direct clinical services to patients under clinical supervision. Fellowship graduates should have the potential to be role models in leading, developing, conducting, and evaluating innovative research, education, and clinical care in health issues pertaining to women Veterans.

Elective Activities

Rotations with the Population Council, World Health Organization, American College of Obstetrics and Gynecology, and other similar agencies and NGOs are available.

Special Certificate(s)/Degree(s) Offered

Master’s Degree in Science (Health Services, Epidemiology) or Education at the Boston University School of Public Health or School of Education.

Goals of the Program

The objective of the program is to develop specialists focused on research, teaching and clinical practice in contraception and abortion. Working with respected and innovative leaders in the field, fellows receive training in clinical and epidemiologic research, develop clinical and teaching skills, have opportunities to work internationally and connect to a rapidly expanding network of family planning experts.

Reason for Initiating Program

To enhance the academic and operational status of family planning and abortion services and to prepare specialists who can provide family planning leadership through academic or programmatic positions while also providing excellent clinical care.
Eligibility Requirement(s)
Board eligible/certified in their trained specialty is required.

Required Activities
Fellows will be expected to divide their time between global research, Harvard School of Public Health, or other classes, and clinical work. The curriculum is tailored to fellows’ individual interests and is divided into six areas: (1) Understanding the landscape of Global Women’s Health; (2) Women’s Health and Human Rights; (3) Key Issues in Global Women’s Health; (4) Methods of Global Health Research; (5) Monitoring and Evaluation of Global Women’s Health Programs; and (6) Leadership Skills. These are achieved through a combination of in-class learning, educational seminars, journal clubs, research retreats, intense mentorship and various other academic activities.

Elective Activities
The program supports training related to each fellows’ individual research interests, as well, offers the option of participating in the Humanitarian Studies Initiative Training Program.

Special Certificates/Degrees Offered
Masters Degree in Public Health

Goals of the Program
Successful Global Women’s Health fellows will:

1. Be on the path towards a successful career dedicated to furthering the health and well-being of women globally;
2. Be able to conduct clinical and field research based on solid quantitative and analytic research skills;
3. Obtain fundamental knowledge and understanding of global health issues that uniquely affect the health of women within the context of specific social, cultural, and political environments;
4. Develop administrative leadership skills through understanding how to assess, build, implement, monitor, and evaluate Global Women’s Health programs; and,
5. Understand the particularly vulnerable role of women in humanitarian crises, war, conflict and disasters.

Reason for Initiating the Program
Brigham & Women’s Global Women’s Health Fellowship seeks to train physicians for successful careers dedicated to furthering the health and well-being of women globally through innovative, meaningful and wide-reaching research. This two-year training program prepares physicians who want to pursue an academic career path in Global Women’s Health research, understand how best to serve specific populations of women, and contribute to the knowledge-base of the field of Global Women’s Health.

URL: http://www.brighamandwomens.org/Departments_and_Services/womenshealth/connorscenter/GWH
Eligibility Requirement(s)
Completion of 4 years postgraduate training in psychiatry.

Required Activities
- Outpatient women’s mental health clinical services at the Gretchen S. and Edward A. Fish Center for Women’s Health and the Brigham Women’s Mental Health Service
- Outpatient reproductive psychiatry services at the Connors Center for Women and Newborns
- Women’s mental health teaching rounds and didactics
- Teaching and leadership training workshops
- Participation in a scholarly project

Elective Activities
- Inpatient consultation/liaison to Obstetrics and Gynecology
- Participation in psychiatric services for women undergoing treatment for infertility
- Participation in psychosocial services for women with breast and gynecologic cancers
- Participation in women’s mental health research

Special Degree(s)/Certificate(s) Offered
None are offered.

Goals of the Program
Fellows will acquire knowledge and skills related to the expression and treatment of psychiatric disorders in women, including their relationship to sex, gender and reproductive cycle events.

Other Program Features
Brigham and Women’s Hospital is a National Center of Excellence in Women’s Health. The Gretchen S. and Edward A. Fish Center for Women’s Health is an innovative, multi-specialty practice that co-locates specialty expertise in women’s health and mental health with primary care for women. The Connors Center for Women’s Health and Gender Biology focuses on women’s health throughout the life span, promoting collaborative initiatives to improve patient care by translating research findings into clinical practice. The Connors Center conducts research on sex- and gender-based biology and the impact of sex and gender on disease, outcomes and the delivery of care.

Reason for Initiating Program
This fellowship was designed to train clinicians to meet the growing need for expertise in women’s mental health, utilizing a multifaceted conceptual framework to understand sex and gender influences on health and vulnerability to illness across the lifespan.
Eligibility Requirements
Evidence of promise as an educator and independent investigator in the area of consultative and obstetric medicine. Applicants should be board certified or board eligible internists. Medical graduates trained outside of the U.S. must be graduated from a school on the ECFMG list of approved international medical schools and complete ECFMG certification, pass a minimum of USMLE Steps 1 & 2, and obtain a J1 visa. Special arrangements may be made with Dr. Chen for Fellows active in another subspecialty program to serve an elective rotation for an optional term of 4 to 8 weeks.

Required Activities
Internists spend half of the two year program supervising an in-patient medical consultation service caring for the medically ill gravida. Fellows work directly with senior medical residents on the consult service, and are trained in both the doing and teaching of medical consultation in pregnancy. Two half days a week are spent in an ambulatory multidisciplinary consultative experience focusing on medical care of the pregnant woman, including participation in the Specialty Care in Pregnancy clinics focusing on specific areas, such as endocrinology, cardiology, hematology and rheumatology. Other time is spent working on clinical research projects and doing epidemiological and biostatistics course work at Brown University.

Elective Activities
A one-month elective rotation is open to third year internal medicine residents interested in learning more about consultative medicine with a special emphasis on medical problems in pregnancy. For more information, please contact Sandra Medina by calling 401-274-1122, Ext. 1134 or by email at SMedina@wihri.org.

Special Degree(s)/Certificate(s) Offered
A Certificate bearing the hospital seal and that of Brown University, signed by the Chief of Medicine and the Director of the Fellowship is issued to graduating Fellows in recognition of their service to Women & Infants Hospital as a Fellow in Consultative and Obstetric Medicine during the stated training period.

Goals of the Program
Fellows work in both the inpatient and outpatient settings on the Medicine Consultation Service at Women and Infants’ Hospital to acquire knowledge in the physiology of normal pregnancy and the pathophysiology of diseases occurring in pregnancy and postpartum; learn to diagnose and treat medical complications of pregnancy; learn to be an effective consultant to obstetricians and gynecologists and other internists and subspecialists; develop practical teaching skills through the supervision of senior medical residents and medical students. Fellows will also complete a research project in the area of medical problems in pregnancy. With the assistance of a faculty advisor, it is expected that the work will be presented at a national meeting and published in a peer review journal.

Other Program Features
Weekly fellows lecture series, fellows case presentations, fellows research meetings, journal club, Rhode Island Hospital grand rounds, OB/GYN grand rounds, medical consultation clinics, opportunities to enroll in Brown University courses in biostatistics and epidemiology, attendance at national meetings.

Reason for Initiating Program
Ground was broken in 1992 when the Department of Medicine, Women & Infants’ Hospital and the Warren Alpert School of Medicine of Brown University joined forces in first offering the fellowship in Obstetric & Consultative Medicine. Prior to that time training in the evaluation and management of medical problems in the pregnant patient or those contemplating pregnancy was not available to the internist, nor were they exposed to the future health risks and pregnancy complications in these patients. Now there are 24 physicians who have completed the fellowship, the majority of whom have attained prominence in academic medicine around the world.
Eligibility Requirement(s):
Completion of ACGME or AOA accredited residency in Family Medicine; or American Board of Family Medicine or American Osteopathic Board of Family Practice certification is required.

Required Activities
- Precepting Medicine residents, performing Gyn procedures with a supervising OB/Gyn attending and triaging abnormal Paps and mammograms for management at the weekly VA Gyn/Urgent followup/Preventive Health clinic;
- Coordinate weekly Women’s Health lecture series for residents and medical students at the VA, including giving short talks on Women’s Health topics and scheduling visiting lecturers;
- Scholarly activity at the VA on an ongoing project or another of your choosing;
- Patient care in UH Family Medicine Center including option for and encouragement of small continuity OB practice under preceptorship of Family Medicine attendings;
- Medical student teaching at UH both during patient care sessions and for required core clerkship in Medicine/Family Medicine in small group lectures and workshops;
- Colposcopy course faculty for UHCMC Family Medicine PGY2 course;
- Precepting Family Medicine residents at Adolescent clinic, Free Medical Clinic of Greater Cleveland and Care Alliance Health Center (homeless clinic), in rotation with other fellows.

Elective Activities
Gender-focused longitudinal or block experiences at the VA and/or UH in female urology/urogynecology, Gyn, rheumatology, hematology-oncology, breast surgery, sports medicine, prevention, female psychiatry, sexual medicine, addiction/PTSD and others, tailored to your needs and interests.

Special Degree(s)/Certificate(s) Offered
Letter of completion.

Goals of the Program
The fellowship is intended to provide expanded training in various aspects of Women’s Health while maintaining proficiency in the wider discipline of Family Medicine.

Other Program Features
Vacation and conference time as well as book money stipend are provided.

Reason for Initiating Program
To improve the health of women by training physicians in the comprehensive and complex needs of the female patient.
Eligibility Requirement(s)
Medical Degree from accredited school.
Completion of a residency in internal medicine; completion of a clinical cardiology fellowship preferred…Unrestricted California license as Physician.

Required Activities
Under the direction of Dr. Bairey Merz, the Fellow will work with Dr. Bairey Merz in her pioneering research in the prevention and diagnosis of heart disease in women in this 1 year unaccredited fellowship. Specifically, the Fellow will participate and facilitate the clinical aspects of the ongoing research directed at improved understanding the sex and gender differences in heart disease, in order to translate these research findings into improved heart disease care for women.

Didactic Components
The fellows participate in the Cedars-Sinai Clinical Scholars Program which includes didactics in biostatistics, ethics, research study design, abstract/manuscript writing, grant writing and submission, research budgeting and contracting, and electives. Additional monthly conferences, journal club, Colloqui and quarterly Interdisciplinary Grand Rounds. Additional tutorials with Designated Mentor(s), as appropriate. Career Development Seminars, as well as additional didactic and ad hoc options are available through the UCLA and USC systems.

Special Degree(s)/Certificate(s) Offered
Fellows are eligible for the Cedars-Sinai Clinical Scholars Program (http://www.cedars-sinai.edu/Research-and-Education/Departments/Biomedical-Sciences/Clinical-Scholars-Program/)
Fellows are eligible for course work at UCLA leading to a Master of Public Health degree

Goals of the Program
To provide focused training in clinical and translational research with regard to heart disease in women, to train heart health practitioners in research, teaching, health administration and policy in women’s health, and to respond to the needs of individual residents, fellows, faculty and voluntary staff regarding women’s heart health in the medical institution and community.

The Women’s Heart Center Teaching Faculty (Drs Bairey Merz, Shufelt, Mehta) will assess the activities and performance of the fellow, and will discuss the evaluations with the fellow. For the purpose of graduation, the fellow in this program is evaluated and must demonstrate competency in the following areas: 1) Patient care, 2) Medical knowledge, 3) Practice-based learning and improvement, 4) Interpersonal and communication skills, and 5) Professionalism

Reason for Initiating Program
The Women’s Guild of Cedars-Sinai Medical Center raised money for the Women’s Guild Endowed Chair in Women’s Health in response to the awareness of improving Women’s Health through education, research, and training. The current chair-holder, Dr. Bairey Merz, started this fellowship as part of a comprehensive Women’s Health Program at Cedars-Sinai Medical Center. Current funding comes from philanthropic support.
Eligibility Requirement(s)
Completion of residency in Internal Medicine or Family Medicine is required.

Required Activities
The fellowship includes clinical, collaborative, interdisciplinary rotations including but not limited to: Center for Specialized Women’s Health at the Women’s Health and Breast Pavilion, Pelvic Floor/Voiding Center, Metabolic and Osteoporosis Bone Center, Breast Services, Cardiology Prevention Clinic, Menopause Clinic, and Women’s Health Psychiatry. Completion of a project on a gender-based topic is required. Training and hands-on experience in research with a view to starting a clinician scholar career are emphasized.

Elective Activities
Multiple offerings throughout the entire Cleveland Clinic Health System, as well as our geographic Center for Specialized Women’s Health on the Main Campus.

Special Degree(s)/Certificate(s) Offered
A certificate of training as a Clinical Scholar specializing in Women’s Health from the Cleveland Clinic Foundation is offered. Fellows have the option to earn a Master of Public Health degree. All fellows are expected to become NAMS credentialed menopause practitioners.

Goals of the Program
To educate future clinicians, clinician-educators, and researchers in the areas of prevention and treatment of diseases unique or more prevalent in women.

Other Program Features
Fellows will receive extensive education in women’s health practice management, experiential training opportunities, and community outreach as part of the Cleveland Clinic’s effort to provide clinically effective, caring, and cost-conscious medical care promoting health and wellness. Skills in research and leadership effectiveness are formally emphasized.

Reason for Initiating Program
The fellowship was developed out of the interest of the faculty in sharing Cleveland Clinic’s available resources for the exploration and study of the gender-related aspects of illness.
Eligibility Requirements

A medical degree is required and the candidates must be board eligible in their specialty. These can include Obstetrics and Gynecology, Internal Medicine, Endocrinology, Family Medicine, or Primary Care.

Required Activities

The Women’s Health Scholar is a position offered for one year for training in the research and practice of menopause and hormonal disorders and women’s health. The training will include participation in the management of clinical trials, and original grant research as well as attendance at the clinical research seminar series. Training will include menopause management including osteoporosis, perimenopause, lowering risk factors for chronic disease, mood disorders in the hormonally vulnerable women, management of the high risk breast cancer patient and the diagnosis and management of menstrual disorders in pre and post menopausal women including polycystic ovarian syndrome and hypothalamic amenorrhea. Training will also include common endocrine disorders both in young women and post menopausal women.

Elective Activities

Electives are offered to trainees in osteoporosis and various research areas.

Special Degree(s)/Certificate(s) Offered

No degrees are offered.

Goals of the Program

The goal of the program is to provide a broad base of training in women’s health including menopause management, office gynecology, common endocrine and medical and gynecologic problems of women so that coordinated care may be provided by one physician.

Other Program Features

The Scholar will be expected to do independent research and will receive training in grants submissions, both pharmaceutical and NIH funded. Scholars will be expected to publish and lecture on the subject of their chosen research. Part-time positions will be considered.

Reason for Initiating Program

The availability of the Center for Menopause Hormonal Disorders and Women’s Health as a clinical resource and the demand for better training in women’s health.
Institution(s)
Brody School of Medicine at East Carolina University

Program Type: Fellowship in Women’s Health

Date Established: 2001
Number of Positions: 1 per year
Duration of Program: 1-2 years
Sponsored by:
East Carolina University

Co-Sponsoring Institution(s)/Department(s):
Department of Family Medicine and Center for the Advancement of Women’s Health

Contact(s):
Dorothy Butler, M.D., Ph.D.
Telephone: 252-744-5517
Fax: (252) 744-4614
E-mail: butlerd@ecu.edu
Website: www.ecu.edu/cs-dhs/fammed/fellowships/women-fellow-overview.cfm

Eligibility Requirement(s)
North Carolina Board Certified/Board Eligible Family Physician.

Required Activities
Breast Clinic (3 months); Obstetrical Ultrasound (Longitudinal); Faculty Development Course; Skills Clinic; Maternity Care Clinic (OB Fellow only-Longitudinal); Prenatal Care Clinic (OB Fellow only); Labor and Delivery call is one evening per week and one weekend per month with Family Medicine Attending Physician Supervision; one Grand Rounds presentation during one-year fellowship; Participation in teaching activities in the resident curriculum; Creative activity encouraged.

Elective Activities
Maternal Fetal Medicine; Chronic Pelvic Pain Clinic; Behavioral Medicine; Lactation Consultation; Nutrition; Other Specialty of Choice (Will be arranged by fellowship director upon request of fellow).

Special Degree(s)/Certificate(s) Offered
Certificate offered.

Goals of the Program
To support training for primary care physicians in comprehensive and coordinated women’s health primary care and formalizing women’s health training in the attitudes, knowledge, and skills required to respond to the special health care needs of women.

Other Program Features
Concentration could include clinical strategies in curriculum development or clinical teaching. Clinical appointments are held in the Department of Family Medicine.

Reason for Initiating Program
To support the mission of the Brody School of Medicine at East Carolina University to improve the health care of eastern North Carolina through the advancement of medical education and research. The fellowship program seeks to improve the health professional training in primary care of women by establishing academic and community leaders in women’s health care.
Eligibility Requirement(s)
Completion of a Family Practice residency program (preferred) or an Internal Medicine Residency is required.

Required Activities
Longitudinal care of patients in the Family Medicine Center with clinical rotations in a variety of areas of women’s health. The fellow is required to complete a research or scholarly project in the fellow’s area of interest (e.g. eating disorders, women’s heart health, breastfeeding, and sports medicine).

Elective Activities
Fellows assist the faculty in teaching residents and medical student in full-spectrum family medicine, including gynecological procedures and obstetrics. Fellows can also participate in faculty development seminars (e.g. adult learning theory, curriculum design, epidemiology, etc.) along with our faculty development fellow. We offer a supportive and flexible environment that encourages the fellow’s individual interests.

Special Degree(s)/Certificate(s) Offered
None are offered.

Goals of the Program
To provide advanced training in the broad spectrum of women’s health.

Other Program Features
Information was not provided.

Reason for Initiating Program
This fellowship was started to provide advanced training in women’s health. It is designed for clinicians interested in obtaining advanced training in the broad spectrum of women’s health.
Eligibility Requirement(s)
Completion of an accredited residency in Internal Medicine, Family Medicine or Obstetrics and Gynecology.

Required Activities
The Women’s Health Fellowship provides advanced clinical training in areas relevant to the health of women through the adult lifespan. Fellows may choose from one of two training tracks: (1) An 18-month multidisciplinary clinical training program with a mentored research project or (2) One year of didactic course work toward a Master in Public Health (MPH) through partnership with the University of Minnesota-Rochester campus, followed by one year of multidisciplinary clinical training and scholarly activity. Required clinical rotations for all fellows include: Women’s Health Clinic (focused on sexual and menopausal medicine), Medical and Surgical Gynecology (including Gynecology Oncology), Maternal-Fetal Medicine, Obstetrics, Urogynecology, Bone Clinic, Nutrition Clinic, Medical and Reproductive Endocrinology, Breast Health (including Breast Diagnostic and Cancer Clinics, Breast Imaging and Breast Surgery) and Women’s Cardiovascular Clinic. Numerous elective clinical rotations are available and will be decided upon by the fellow with the input of the Program Director to design a clinical training program suited to the specific interests and career goals of each trainee. Fellows are expected to participate in monthly journal clubs and other educational activities.

Elective Activities
Clinical rotations are available in areas including but not limited to Complimentary and Integrative Medicine, Psychiatry, Dermatology, Headache Clinic, Nicotine Dependence, Pain Clinic, Rheumatology and Spine Clinic.

Special Degree(s)/Certificate(s) Offered
Certificate offered. Degree offered depending on training track and options chosen.

Goals of the Program
The Women’s Health Fellowship at Mayo Clinic combines interdisciplinary training in the prevention, diagnosis and treatment of health conditions specific to women, more common or more serious in women, having distinct causes, manifestations, outcomes or treatments in women and/or having high morbidity or mortality in women.

Other Program Features
Fellows participate in Faculty Development including training in medical education. A wide variety of teaching and additional educational opportunities are available. Fellows may choose to complete the Clinical Research Training Program or a Master of Science in Clinical Research as part of a two year training program. Mayo Clinic has been awarded NIH funding for the Building Interdisciplinary Research Careers in Women’s Health program (BIRCWH), a career development grant which supports young faculty focused on careers in women’s health research, offering educational and collaborative opportunities to our fellows.

Reason for Initiating Program
To develop leaders in the evolving field of Women’s Health, to advance discovery in areas of medicine relevant to the health of women and to improve health care outcomes for women.

Clinical rotations are available in areas including but not limited to Complimentary and Integrative Medicine, Psychiatry, Dermatology, Headache Clinic, Nicotine Dependence, Pain Clinic, Rheumatology and Spine Clinic.

Special Degree(s)/Certificate(s) Offered
Certificate offered. Degree offered depending on training track and options chosen.

Goals of the Program
The Women’s Health Fellowship at Mayo Clinic combines interdisciplinary training in the prevention, diagnosis and treatment of health conditions specific to women, more common or more serious in women, having distinct causes, manifestations, outcomes or treatments in women and/or having high morbidity or mortality in women.

Other Program Features
Fellows participate in Faculty Development including training in medical education. A wide variety of teaching and additional educational opportunities are available. Fellows may choose to complete the Clinical Research Training Program or a Master of Science in Clinical Research as part of a two year training program. Mayo Clinic has been awarded NIH funding for the Building Interdisciplinary Research Careers in Women’s Health program (BIRCWH), a career development grant which supports young faculty focused on careers in women’s health research, offering educational and collaborative opportunities to our fellows.

Reason for Initiating Program
To develop leaders in the evolving field of Women’s Health, to advance discovery in areas of medicine relevant to the health of women and to improve health care outcomes for women.
Eligibility Requirement(s)
We have two tracks: MD and PhD. Requirements for MD include completion of a residency program and board-eligible in medicine, family medicine, psychiatry, obstetrics & gynecology or urology. Requirements for PhD include completion of doctoral degree in allied health fields such as psychology and nursing.

Required Activities
Fellows must complete an individualized learning plan approved by the program director and advisory board. This plan will define the required activities commensurate with the fellow’s career goals. Typical required activities for the MD track include 25% clinical effort, where at least one half-day weekly is spent at the VA women’s health clinic, plus 75% academic development in research, education, or quality. Typical required activities for the PhD track are similar to PhD Nursing and Psychology post-docs, where the fellow will conduct research or quality projects and participate in the VA Women’s Health clinic operational innovations.

Elective Activities
Fellows may elect a full complement of women’s health clinical activities including multidisciplinary comprehensive women’s health (with medicine, gynecology, and mental health input), consultative women’s health (with a focus on midlife, wellbeing, incontinence and sexual health), and subspecialty women’s health (such as osteoporosis, breast, contraception, and women’s mental health clinics). Depending on the fellow’s career goals, fellows may pursue mentored research, educational administration, teaching, quality projects, and clinical innovations.

Special Degrees/Certificates Offered:
Master’s program in Public Health, Clinical and Translational Science, or Bioethics. Special seminars in teaching and educational administration and health statistics.

Other program Features:
Fellows can collaborate within the program (MD and PhD collaboration) and can collaborate with the Medical College of Wisconsin’s Primary Care Fellows (sponsored by a HRSA Fellowship). Fellowship faculty include the full range of investigators, educators and clinicians at our large academic medical center.

Goals of the Program:
To advance the health care of women, particularly veterans, and develop academic women’s health providers and researchers.

Reason for Initiating Program
To create a critical mass of energetic minds from multiple fields, all focused on women’s health.

**Eligibility Requirement(s)**
Completion of a residency in Internal Medicine, Surgery, Psychiatry, Obstetrics and Gynecology, or Family Medicine is required.

**Required Activities**
Seventy-five percent of the program is devoted to research and teaching and 25% is devoted to clinical activities.

**Elective Activities**
The following clinics are available: Breast, Psychiatry, Domestic Violence, Adolescent Medicine, Gynecology, Urogynecology, Osteoporosis, Endocrinology, and Behavioral Medicine.

**Special Degree(s)/Certificate(s) Offered**
An optional third year is available based upon individual fellowship goals. Master of Public Health degrees and Human Investigation Program (HIP) certificates are also available.

**Goals of the Program**
To train individuals for an academic career which includes research and teaching in women’s health.

**Other Program Features**
Our program is closely allied with fellowships in Hospital Medicine, General Internal Medicine, Informatics, and Geriatrics. We have a strong relationship with OHSU’s AHRQ-supported Evidence-based Practice Center.

**Reason for Initiating Program**
Our institution, in conjunction with the Oregon Health Sciences University, has the components to provide excellent training in women’s health, research methodology, and education.
Eligibility Requirement(s)
Applicants must have a Medical Degree (MD) and have completed an approved residency or Doctorate of Philosophy (PhD) in psychology, nursing or pharmacology.

Required Activities
At the start of the 2-year program, fellows and senior mentors will develop a training plan that is tailored to the background and interests of each fellow and the resources available at the SFVAMC and UCSF. We expect fellows to develop content and methodologic expertise, strong communications skills, and experience and skill in building and leading teams. In the first year, fellows will complete the UCSF Advanced Training in Clinical Research (where they may elect to obtain a Masters Degree in Clinical Research) and may also take courses from the UCSF Programs in Biological Sciences and Biomedical Sciences (www.epibiostat.ucsf.edu). Advanced Training in Clinical Research includes training in core disciplines including epidemiologic methods, biostatistics, clinical trials, molecular methods, medical informatics, scientific writing, grant preparation, and research ethics. The second year will focus on completion of research and writing projects under the supervision of senior faculty. Mentors will provide access to existing databases and repositories of biological specimens, advice in selection of research projects, assistance in study design and performance, guidance in ethical conduct of research and career counseling. A Women’s Health Research Seminar will provide an opportunity for fellows to present work in progress, address methodologic issues and improve writing and presentation skills.

Goals of the Program:
The San Francisco Veterans Affairs Medical Center is dedicated to developing a cadre of well-trained researchers in women’s health to advance healthcare for women Veterans.

Reason for Initiating Program
To train clinical researchers to advance knowledge in women’s health through conducting high quality, clinically relevant research.
Eligibility Requirement(s)
Completion of an accredited residency training program or of a doctoral degree in an associated health field; US citizenship or a current visa and an ECFMG certificate; physicians must be board certified or eligible in internal medicine, Ob/Gyn, family medicine, psychiatry, or surgery.

Required Activities
75% time research, including master’s level classes in epidemiology and statistics, and teaching interns/residents; and 25% clinical time.

Elective Activities
No information provided.

Special Degree(s)/Certificate(s) Offered
Master’s in Public Health.

Goals of the Program
To train creative, independent, ethical and productive leaders in health services research and related fields, and to produce outstanding practitioners (proficient as researchers, clinicians, and educators) for academic VA positions in the area of women’s health, in order to advance and improve VA women’s healthcare as well as the VA women’s healthcare delivery system.

Other Program Features
This fellowship, funded by the Department of Veterans Affairs, is open to primary care physicians, obstetricians and gynecologists who are interested in research in women’s health. Fellows in this program also develop competencies in clinical care for women, including performance and minor gynecologic procedures, through the VA Women’s Health Center program. Fellows complete a core curriculum including formal course work, usually leading to a degree, at the UCLA School of Public Health; informal course work in fellowship seminars; and an independent research project.

Reason for Initiating Program
This fellowship program was awarded as the result of a competitive application process through the Department of Veterans Affairs. It supports our mission to provide comprehensive, coordinated healthcare and education, based on women’s life cycles, to women veterans and allow Fellows multidisciplinary clinical practice and research opportunities.
Eligibility Requirement(s)
Medical degree and residency are required.

Required Activities
Completion of the Advanced Training in Clinical Research in the first year and completion of research and writing projects in the second year. For complete details, please visit http://www.epibiostat.ucsf.edu.

Elective Activities
For complete details, please visit http://www.epibiostat.ucsf.edu.

Special Degree(s)/Certificates(s) Offered
Master's Degree in Clinical Research. For complete details, please visit http://www.epibiostat.ucsf.edu.

Goals of the Program
To develop a cadre of well-trained clinical researchers in women’s health.

Other Program Features
At the start of the 2 year program, fellows and senior mentors will develop a training plan tailored to the background and interests of each fellow and the resources available at UCSF. Fellows are expected to develop content and methodologic expertise, strong communications skills, and experience and skill in building and leading teams.

Reason for Initiating Program
This fellowship program builds on the research success of UCSF, the institution’s commitment to women’s health, and the availability of an extensive array of ongoing research projects to develop a cadre of well-trained clinical researchers in women’s health.
Eligibility Requirement(s)
Completion of 3 years postgraduate training in psychiatry, and must be in 4th year of training.

Required Activities
Rotations through the 3 different Women’s Clinic one of which is in the department of Obstetrics and Gynecology; participation and coordination of Women’s Consultation Service; participation in the Women’s Mental Health Seminar, and the Women’s Mental Health Tutorial; supervision of fourth-year medical students during Women’s Mental Health electives.

Elective Activities
Participation in the Illinois Perinatal Mental Health Project; rotations through the Women’s Inpatient Treatment Service and/or the Eating Disorders Clinic; teaching in the Women’s Mental Health Seminar; co-leading peripartum group.

Special Degree(s)/Certificate(s) Offered
None are offered.

Goals of the Program
Fellows will acquire knowledge and skills related to the expression and treatment of psychiatric disorders in women, including their relationship to reproductive cycle events.

Other Program Features
Research experience related to women’s mental health and a didactic curriculum in women’s mental health are offered. Fellows will have opportunities to publish and review articles and/or book chapters. This program has received the American College of Psychiatrists’ Award for Creativity in Psychiatric Education and the American Psychiatric Association’s Gold Award for Innovative Services.

Reason for Initiating Program
This fellowship was designed to train clinicians to meet the growing need for expertise in women’s mental health by applying research findings to clinical practice, and teaching state-of-the-art interventions.
Eligibility Requirement(s)
A New Jersey medical license and board eligibility in Family Medicine.
ACLS certified (for moderate sedation licensing)

Required Activities
Training in first trimester abortion care (options counseling, medication abortion and aspiration abortion) to trainer-level competence in a high-volume family planning clinic AND a family medicine outpatient office; training in family planning, including provision of long-acting reversible contraceptives (LARC) to trainer-level competence; original scholarly research project design and implementation and dissemination of results via peer-reviewed publications and/or scholarly presentations; resident and medical student teaching during Women’s Health Rotation and Student Electives; clinical sessions and establishment of continuity patient panel at Rutgers Student Health; local and national CME/research presentations; clinical rotations in selected areas of women’s health; community service/outreach tailored to the individual’s interests; practice-based quality improvement initiatives tailored to the individual’s interest.

Elective Activities
Opportunities for clinical rotations in Breast Disorders, Urogynecology, Reproductive Endocrinology, and STI Clinics can be arranged based upon the individual’s interests. Fellows are encouraged to take a leadership role in addressing women’s health issues most relevant to them, utilizing our educational, clinical, community, and legislative resources. Fellows are also invited to participate in women’s health related clinical trials, educational programs, and professional organizations.

Special Degree(s)/Certificate(s) Offered
None were specified.

Goals of the Program
To develop leaders in women’s reproductive health care, education, research and advocacy.

Other Program Features
This program provides outstanding hands-on abortion and LARC training opportunities, excellent medical student and resident teaching experience, and the ability to provide reproductive health care in a variety of settings including a dedicated family planning clinic, an academic family medicine office and a university student health service. Fellows will graduate with an appreciation for and expertise in the provision of family planning and abortion services in multiple health settings, particularly in primary care. We encourage the fellows to tailor their clinical rotations and scholarly projects to their interests and future career goals. Fellows receive high-quality, consistent mentorship from experienced faculty members with expertise in medical education, family planning and abortion care.

Reason for Initiating Program
To develop and coordinate the essential resources and opportunities for Family Physicians to become abortion and LARC providers, trainers, and women’s reproductive health care advocates.
Eligibility Requirement(s)
Completion of residency in Family Medicine, Internal Medicine, Obstetrics/Gynecology, Pediatrics, or Psychiatry is required, further subspecialty training favorably considered.

Required Activities
Selected rotations in the Women’s Health Clinic, Obstetrics and Gynecology Primary Care Clinic, Endocrinology and Metabolism Eating Disorders, Cardiology GI, Mental Health, Sexual Dysfunction, Geriatrics. Attend University of Michigan BIRCWH Seminar Series.

Elective Activities
Family Planning, Adolescent Gynecology, International Rotation, Institute for Research on Women and Gender

Special Degree(s)/Certificate(s) Offered
Would be addressed on an individual need basis

Goals of the Program
Unsurpassed preparation for clinically focused Women’s Health specialty or academic Women’s Health careers.

Other Program Features
The fellowship offers a (minimum) one year clinical training fellowship with selected rotations at the various entities within the Women’s Health Program at the University of Michigan (examples include the Women’s Cardiac Program, the Women’s GI Program, the Women’s Mental Health Program, the Women’s Pulmonary Clinic, the multidisciplinary Adolescent clinic, Hi Risk Ob Clinic including the substance abuse directed Partnering for the Future clinic, he Michigan Bowel/Incontinence Program, Medical Complications Contraception clinic, Pregnancy Loss Clinic, Center for Reproductive Medicine, and numerous other components of the UM Women’s Health Program). Each fellow has an individualized curriculum to reflect past training that is designed to meet her/his specific goals and objectives. Multi-disciplinary clinical and research mentorship is available for each fellow. A series of scholarly outputs and research experiences are expected of each fellow. Participation in career development programs (e.g. BIRCWH) at the University of Michigan are expected and include mandatory participation in core department fellowship curricular offerings in medical education, career skills, leadership training and research techniques.

Reason for Initiating Program
To train clinical and academic leaders in a rich collaborative environment utilizing the resources of the University of Michigan Women’s Health Program.
Eligibility Requirement(s)
Completion of an Internal Medicine residency is required.

Required Activities
This fellowship is designed to develop generalist physicians with an interest in academic women’s health, either as a clinician educator or a clinician investigator. Fellows are required to complete either a Master’s Degree in Medical Education or a Master’s Degree in Clinical Science. Seventy-five percent of a fellow’s time is devoted to classwork and scholarly activity. Educators teach, develop and/or evaluate curriculum. Investigators generally pursue careers in health services research. The remaining twenty-five percent of the fellow’s time is devoted to clinical work in women’s health.

Elective Activities
The range of elective coursework and scholarly activities is extremely broad. Active areas of investigation include contraceptive decision making, menopause and quality of life, women and obesity, and cardiovascular disease in women. Educators have opportunities to work both at the medical student and resident level. The training program is always tailored to the individual’s needs.

Special Degree(s)/Certificate(s) Offered
Either a Master’s in Medical Education or a Master’s in Clinical Science.

Goals of the Program
To train generalist physicians with an interest in academic women’s health.

Other Program Features
This program partners with the following University of Pittsburgh programs: Clinical and Translational Science Institute, General Medicine Fellowship Program, Magee Women’s Hospital, RAND Corporation, University of Pittsburgh School of Public Health, and the University of Pittsburgh School of Medicine.

Reason for Initiating Program
To develop training programs designed to expand the faculty expertise in women’s health in both the educational and the research arenas.
### Institution(s)
- University of Wisconsin School of Medicine and Public Health/
  William S. Middleton Veterans Hospital

  Madison, WI 53715
- **Telephone:** (608) 263-9770
- **Fax:** (608) 265-6423
- **E-mail:** mlcarnes@wisc.edu
- **Website:** [http://www.womenshealth.wisc.edu/Home/Programs/TrainingAndCareerDevelopmentPrograms.aspx](http://www.womenshealth.wisc.edu/Home/Programs/TrainingAndCareerDevelopmentPrograms.aspx)

### Eligibility Requirement(s)
Physicians must be board certified or board eligible in Internal Medicine, Psychiatry, or Obstetrics & Gynecology; non-physician clinical postdoctoral fellows may hold doctoral degrees in Psychology, Nursing, Speech Language Pathology, or Pharmacy.

### Required Activities
Weekly multidisciplinary clinic, course on women and leadership, monthly administrative and research conference, and mentored research.

### Elective Activities
A full spectrum of supplemental clinical, didactic, basic or applied research activities are available.

### Special Degree(s)/Certificate(s) Offered
Most physician fellows enroll in a graduate degree program: usually the MS program in Population Health, Clinical Investigation, or Education. Non-physician fellows do not need to complete additional coursework.

### Goals of the Program
To train future leaders in academic health sciences who will be engaged in research teaching, and program development that will improve the health of women.

### Reason for Initiating Program
Women leaders in academic science and medicine are integrally related to advancements in the health of women.
This is a two year interdisciplinary, cross-collaborative fellowship in women’s health that supports one psychology and one internal medicine fellow.

**Eligibility Requirements:**

Psychology Fellow:
1) Doctoral degree or evidence of anticipated completion of said degree, 2) Completion of accredited APA internship or OAA VA internship, or evidence of anticipated completion prior to fellowship, 3) Demonstrated clinical and research experience with women veterans health, 4) US Citizenship

Internal Medicine Fellow:
1) Completion of ACGME accredited IM residency, and Board certified or Board eligible, 2) Not simultaneously enrolled in a residency or fellowship program, 3) Active, unrestricted medical license, 4) Credentialed and privileged at a VA facility, 5) US citizenship, 6) If a foreign graduate, evidence of ECFMG certification

**Required Program Activities:**

Clinical (25%): The Clinical Psychology fellow 1) will be trained in evidence-based practices and provide supervised individual and group therapy in the Military Sexual Trauma and Interpersonal Trauma Clinic, a Dialectical Behavior Therapy Program, and 2) may rotate through primary care and specialty clinics to gain understanding of the impact of mental illness on health behaviors, interactions with providers and health status. The Internal Medicine fellow will provide comprehensive care in the Primary Care Clinic and participate in one or more specialty care clinics, including Gynecology, Musculoskeletal, and Weight Control Clinic at the VASDHS, or the Women’s HIV Clinic, Women’s Cardiology Clinic, Breast Clinic and Gynecology Specialty Clinics at UCSD.

Research/Scholarship (55%):
All fellows complete a research or scholarly project of the fellow’s choosing overseen by the research/scholarship mentor, with evaluation by a mentorship team.

Education (10%):
Fellows attend local and national seminars covering state of the art women’s health research and practice, as well as advanced topics relevant to the fellows’ individualized training plan.

Leadership (10%):
Fellows will be trained in and expected to contribute to program administration through participation on the Women’s Health Committee, local outreach and performance improvement activities and dissemination of women’s health information to staff and trainees through in-service seminars.

**Goals of the Program:**
The overall goal of the Advanced Fellowship in Women’s Health is to provide interdisciplinary training to postdoctoral fellows to prepare them for careers as independent women’s healthcare specialists. Through a combination of clinical, research, and teaching experiences, cross-disciplinary training opportunities, and supervision from women’s health specialists, we aim to cultivate leaders in women’s health.

**Reason for Initiation:**
This fellowship was initiated to better serve the growing population of female veterans with unique needs for which there is insufficient understanding of optimal provision of health services.
